Oilsimple Sampling valve

Oil sampling fittings for Hydraulic and Gearbox capabilities		
Part No	Description	Quantity
SSR SS-6mm MM1/4MLB	6/4" Large Bore	1
SSR SS-6/4 FXF-NV-6000	6/4" needle valve	1

Sampling Valve contains all items described above price is now £78.00
this excludes VAT @ 20%

Characteristics

Combination of sampling valve and mini mess quick connector with sampling connection for use with tubing.
When equipment needs to be sampled many issues can occur which can cause the sample to become invalid from contaminated sampling equipment to incorrect sampling points, the right equipment and devices eliminates that.
Being able to quickly attach your tubing and keep it clean whilst simply attaching to the sample point.
With dedicated large bore sizing the mini mess connections with sampling tube ensure a dedicated sample point to give you data driven results each time every time.

With the ability to sample on line in real time for live zones on pressurised lines.

Thanks to the design of the sampling valve they can easily be installed onto any equipment with fittings and connections available for any need, standard size is 1/4B SPP.

With the all stainless design it can be fitted to any system all that is required is a sampling point survey to ensure correct location for the real oil data.

With the ability to give live sampling in real time with throttle control this means for a controlled sample process.

Features

- Standard all stainless steel material.
- Fits only one size Oilsimple sampling fittings so no error crossover connections.
- Easy to install in multiple applications
- Connected to sampling fitting easily
- Used for High pressure zones
- Designated sample point.
- Allows hands free sampling operations.
- Rated needle valve for 6000PSI
